

ADEKEYE OLUWATOBI

AI Automation Specialist

Lagos, Nigeria | LinkedIn: [linkedin.com/in/oluwatobi-adekeye](https://www.linkedin.com/in/oluwatobi-adekeye) | Portfolio: [Oluwatobi.Adekeye](#)

PROFESSIONAL SUMMARY

AI Automation & Full-Stack Engineer with a BSc in Management Information Systems and a portfolio of production-grade automation systems shipped across lead generation, customer support, content operations, proposal generation, invoice processing, and cross-departmental reporting. I design end-to-end systems that replace manual workflows with reliable, scalable infrastructure — building the full product layer when needed, including React frontends, REST integrations, and well-modeled data backends. Specialized in n8n, Make, Vapi, Airtable, and the OpenAI / Claude API ecosystem. Targeting automation agency roles where I can ship client-facing systems end-to-end.

TECHNICAL SKILLS

Automation & Workflow: n8n, Make.com, Zapier, Apify, Google Antigravity

AI & LLMs: OpenAI API (GPT-4/4o), Claude / Claude Code, Vapi (voice + chat), RAG, prompt engineering, structured JSON output

Data & Backend: Airtable (interfaces, automations, scripting), Google Sheets, REST APIs, webhooks, Node.js, Python, PDF.co, Firecrawl, UseBouncer

Frontend & Full-Stack: React, Vite, JavaScript, HTML/CSS, MERN stack, responsive design

Tools & Platforms: Google Workspace, Notion, Figma, Webflow, Telegram Bot API, Google Calendar API, Gmail API

Engineering Practices: Error handling and retries, deduplication, idempotent writes, fallback logic, concurrency control, structured logging

SELECTED PROJECTS

Voice-Based Customer Support Agent — RelayPay (B2B fintech) | *Vapi · n8n · Claude Code · React · Airtable · OpenAI · Google Calendar · Telegram*

- **Built** a production voice + chat support agent grounded in approved documentation, deployed through a branded React web portal with returning-user detection and live waveform visualization.
- **Integrated** Vapi voice (STT/TTS) and chat (streaming HTTP) with three n8n workflows handling availability checks, booking/rescheduling, and post-call logging.
- **Implemented** automatic email validation via UseBouncer, duplicate-appointment prevention, calendar conflict checks, and Telegram alerts to the support team for every escalation.
- **Logged** structured post-call reports (sentiment, outcome, summary, transcript, recording URL, cost) into a four-page Airtable interface dashboard for support team visibility.
- **Debugged** complex integration issues including Vapi payload extraction, n8n webhook response formatting, toolCallId expression handling, and SDK-to-HTTP migration for chat continuity.

AI-Powered Lead Generation System | *n8n · Apify · Airtable · OpenAI · UseBouncer · React*

- **Built** a three-workflow outbound pipeline that takes a campaign brief and returns enriched, deliverability-verified leads with personalized outreach — cutting campaign turnaround by an estimated 90%.
- **Implemented** GPT-powered input normalization, lead/company deduplication against Airtable, email bounce verification, and website-to-LinkedIn fallback for company enrichment.
- **Generated** a personalized 3-step cold email sequence and LinkedIn message for each lead, grounded in scraped company context.
- **Designed** a global error workflow that catches failures across all three workflows, uses GPT to produce human-readable diagnostics, and logs them to a dedicated Airtable error table.
- **Surfaced results through** a React frontend with dedicated views for campaigns, leads, and error logs.

AI-Powered Content Generation & Publishing System | *n8n · Airtable · OpenAI · Firecrawl · React/Vite · Google Antigravity*

- **Built** an end-to-end content pipeline that ingests a topic or URL and outputs three SEO-driven article drafts from distinct angles, with optional AI-generated images.
- **Added** content-hash-based duplicate detection upfront, plus full version history so human or AI revisions never overwrite prior work.
- **Adapted** approved articles into platform-ready posts for LinkedIn, X, and email newsletter in one step, with direct or cron-scheduled publishing.
- **Reduced** production time by an estimated 85% across three publishing channels while standardizing output quality.

AI-Powered Proposal Automation System | *n8n · Airtable · OpenAI · Google Workspace*

- **Built** a 3-stage proposal workflow (drafting → email-based approval → targeted revision) that turns discovery-call inputs into formatted, client-ready Google Docs proposals.
- **Implemented** hash-based deduplication to prevent reprocessing of duplicate submissions, plus a targeted revision engine that combines original input, previous output, and reviewer instructions for precise rewrites instead of blind regeneration.
- **Added** centralized error handling with up to 3 retries and plain-English failure diagnostics sent to the admin.

Reporting & Dashboard Automation — Cross-Departmental KPIs | *Make.com · Airtable · Google Sheets · Gmail*

- **Built** a single-button Airtable trigger that consolidates Sales (Sheets), Project Delivery (Airtable), and People Ops (Airtable) data into a unified dashboard — replacing a multi-day manual process with a sub-3-minute automated run.
- **Pulled** three data sources concurrently, with concurrency control capping execution to one run per minute to prevent overlapping writes.
- **Implemented** date and currency normalization, missing-field warnings (without halting the run), upsert-based writes to prevent duplicates, and per-source error logging with email notifications.

AI-Powered Invoice Inbox System — Novus Realty | *Make.com · Gmail · PDF.co · OpenAI · Google Sheets*

- **Built** an invoice processing pipeline that monitors Gmail, handles attachments and inline-body invoices, extracts structured fields via OpenAI, and logs them to Google Sheets — with zero human touchpoints.
- **Handled** format inconsistency by routing PDFs, DOCX, and images through PDF.co before AI extraction; non-invoice documents are filtered out before logging.
- **Added** multi-invoice email handling via iterator nodes and duplicate detection on vendor + invoice number before any write.

EDUCATION

BSc, Management Information Systems

Covenant University, 2025.

Relevant Coursework: Systems Analysis & Design, Software Development, Project Management, Process Management, Production Management, Business Administration
